

## IRIS RETRACTOR

Sterile pack  
of 5 pieces in  
a box.

Ideal for small pupils.

Flexible iris retractors are used for temporary retraction (pupil enlargement) of the iris where dilation cannot be achieved pharmacologically.

*Features:*

- Flexible hook made of bright blue PP (Polypropylene).
- Stretches and stabilises the iris during the cataract surgery.
- An adjustable silicon stopper provides a superior grip and allows adjustment of the pupil size.

## DISPOSABLE CAPSULE HOOK

Capsule hooks are used for temporary support of the capsular bag during a cataract surgery when the zones are weak or in case of subluxate lenses.

*Features:*

- Capsule hooks are made of nylon with an adjustable silicon lock.
- Designed such that the hook is angled to be in the plane of the anterior capsule.
- Easy to get a firm and reliable grip on the rim.
- Tip of the hook is rounded to prevent any accidental damage to the peripheral capsule while placing the hooks in the bag.
- Round tip also provides a larger support area per hook thereby reducing the number of hooks required in each surgery.
- Silicon lock helps in retaining the hook in retracted position during the surgery.
